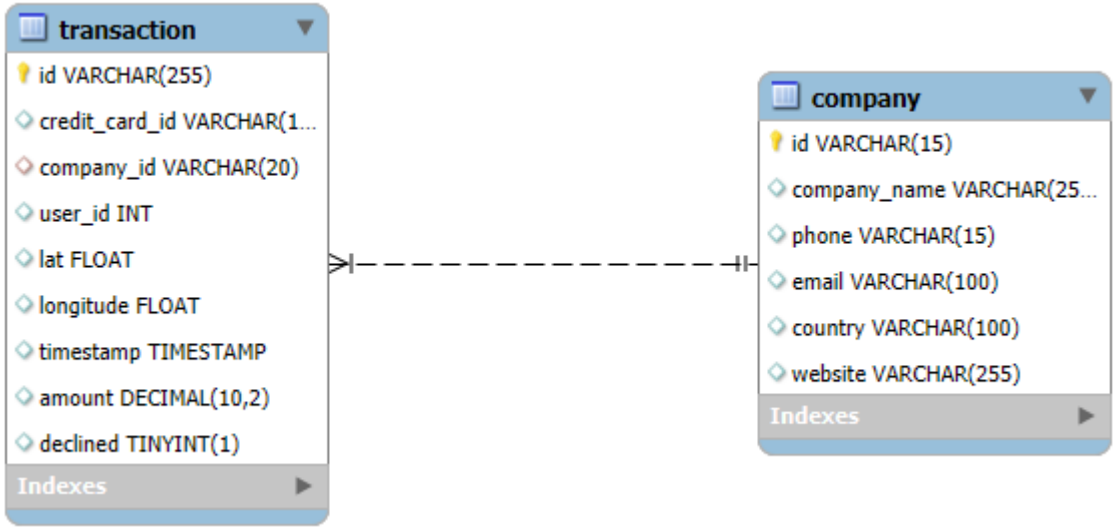
NIVEL 1

Exercici 1

A partir dels documents adjunts (estructura_dades i dades_introduir), importa les dues taules. Mostra les característiques principals de l'esquema creat i explica les diferents taules i variables que existeixen. Assegura't d'incloure un diagrama que il·lustri la relació entre les diferents taules i variables.



El Schema transactions contiene dos tablas: transaction y company. Se trata de una relación de muchos a uno donde una compañía puede estar presente en muchas transacciones, pero donde una misma transacción solo puede estar relacionada con una compañía.

Cada tabla tiene una primary key, relacionándose a través de la unión en transaction.company_id con company.id.

Cada tabla responde a detalles de transaccionales y las compañías involucradas.

Exercici 2

```sql
USE transactions;

-- Llistat dels països que estan generant vendes.

SELECT DISTINCT c.country
FROM transaction AS t
JOIN company as c ON c.id = t.company_id;
```

Ejercicio 2

```sql
-- Exercici 2

-- Necessitem optimitzar l'assignació dels recursos i dependrà
-- de la capacitat operativa que es requereixi, per la qual cosa
-- et demanen la informació sobre la quantitat de transaccions que
-- realitzen les empreses, però el departament de recursos humans
-- és exigent i vol un llistat de les empreses on especifiquis si
-- tenen més de 400 transaccions o menys.

SELECT c.company_name, COUNT(t.id) AS transacciones,
    CASE
        WHEN COUNT(t.id) > 400 THEN "Si"
        ELSE "No"
    END AS mas_de_400_transacciones
FROM transaction AS t
JOIN company AS c ON c.id = t.company_id
GROUP BY c.company_name;
```

Result Grid | Filter Rows: | Export: | Wrap Cell Content:
